Intro

“ Bob: I am wondering if you actually get to use Go in your data pipelines or is it still mostly SQL/Python for you? I am curious how do you go about ensuring data quality in your data pipelines? Does Weave have a formal framework for monitoring/alerting on quality?

Me: We are all go

Bob: Wow! What runs Go for ETL besides Beam/DataFlow?

Me: We are very creative with sql

Bob: I am intrigued!

”
